

# Arad Font

Font Usage Guide

**Given the package you downloaded, there are several folders and files:**

**Main Fonts:** Normal Font Version

- AradVF: Two variable fonts including weight and point axes, for general-purpose and web use
- Static TTF: Font files for general-purpose use
- Static Webfonts: Font files for web use

**Farsi Digits:** A hacked version of Persian numerals

**Non-Latin:** For pairing with your preferred English (Latin) font

**Converting ک to extended ک:**

- Use ss02
- Use Swash

**Converting ی to Reversed ی:**

- Use ss03

**Converting the Rial and Toman symbols:**

- see the visual guide on page 4

**Converting all numbers (English and Arabic) to Persian:**

- Use ss01
- Use the FaNum Version

**Making numbers monospaced:**

- Use Tabular lining

**Making numbers monospaced and converting numbers to Persian:**

- First Use ss01
- Then Use Tabular lining

**UI-specific numbers and currency symbols:**

- Use ss05

## Rial ,Toman and Derham symbols

First Use ss04 and then

ریال → ریال

ریال -> ریال+ء

تومان -> +تومان

تومان -> تومان+ء

تومان -> تومان+ءء

ت -> تومان+ءءء

ؑ -> ریال+ءءء

ؓ -> د.+.ا

## **Accessing Stylistic Sets (ss01, ss02, ...) and other features:**

Inkscape: Text > Text and font > Features

Adobe Illustrator: Window > Type > Opentype > Opentype panel

Adobe Photoshop: Window > Character > Opentype panel

Word: Ctrl+D > Advanced tab > OpenType features

Web: Refer to the instructional file [Help.css](#)

**Good luck**
